

One system for your large stormwater capacity needs

The StormceptorMAX responds to the needs of large-scale industrial and residential areas which may require a single stormwater management device. It provides stormwater quality treatment for areas 20 to 100+ acres and industrial spill volume capture of 15,000+ gallons.

One StormceptorMAX can provide protection for an entire neighbourhood, a full-scale industrial plant or other large developments.

Unique, comprehensive site coverage

- Increased sedimentation chamber extends horizontally rather than vertically
- Non-turbulent treatment environment allows oil to rise and sediment to settle
- Industrial spill protection in dry and wet conditions
- Patented scour prevention technology contains captured oil and sediment for secure storage and easy removal
- Ideal for industrial or residential sites with established infrastructure

Design flexibility

- Modular and expandable, depending on the site's size and water quality objective
- Lower chamber can be constructed of different materials, depending on site conditions
- May be used as part of a stormwater treatment train, complimenting BMPs such as ponds or swales

Unit sizing based on PCSWMM for Stormceptor

- Industry-leading continuous simulation modeling software uses site conditions to project the frequency and intensity of runoff to determine the best system for your site

It's still a Stormceptor

- Continuous positive treatment of total suspended solids (TSS) in stormwater runoff year-round, regardless of flow rate
- Industry-leading reputation for efficiency and reliability

With over 25,000 units operating worldwide, Stormceptor performs and protects every day.

Large Capacity System

Pre-Cast Pipe Construction

Reliable and easy to install

Pre-Cast Box Construction

Larger volume-to-length ratio allows for treatment in a smaller footprint

Cast-in-Place Construction

Flexible and built to suit various projects
